

SERVICE PROVIDER

Abstract

Service Provider is an application which will be used to provide some services like balance enquiry, balance transfer, contacting customer care, recharge and so on, irrespective of the networks. This application allows the user to do the above operations without having the any knowledge on the network dialing codes. Means the user no need to remember all the code details of networks, the application only provide some codes in the form of options and the user simply select the network and uses the options and get the specified service.
