

COMPRESSED AIR CAR

SYNOPSIS

There are so many vehicles that came to influence in the existing world. Their operating systems are based on usual fossil fuel system. At the present sense the fossil fuel can exceed only for a certain period after that we have to go for a change to other methods. Thus we have made an attempt to design and fabricate an ultimate system (AIR CAR) which would produce cheaper & effective result than the existing system. This will be very useful to the future needs of the world.

An attempt is made in the fabrication of a air powered System for a (CAR). This works on compressed air receiving the storage tank . The pneumatic cylinder and the various parts are such as pneumatic hose , wheel assembly, car model ,air tank and with easily available materials to serve and fulfill the purpose of the project.
