ABSTRACT

The Customers who are not pay the Electrical bill of that list is given by electrical employee of that Village or city. The list having service number and name only, but Service number will not be in sequence. He did not know the connected service pole number of Employee then we have to find out the pole where it was located in that particular village or city. It is very long process and it will take more time to interact with that customer, it will take more time. In order to avoid this problem, our project will store all the details of the customers and their respective backend details in the database. so it is easy to retrieve the data’s of the customers without consuming to much of time.
